

On and after October 1, 2022, use the new 2023 ICD-10 CM code:

- **Z79.620** for long term/current use of immunosuppressive biologic.
- **D81.82** for Activated Phosphoinositide 3-kinase Delta Syndrome [APDS], a rare primary immunodeficiency *or* p110d-activating mutation causing senescent T cells, lymphadenopathy, and immunodeficiency [PASLI] disease.

if applicable, code any associated manifestations, such as:

- bronchiectasis (**J47.-**);
- herpes virus infections (**B00.-**);
- other acute respiratory tract infections (**J00-J06; J20-J22**)
- other infections (**A00-B99**);
- pneumonia (**J12-J18**)
